**ABSTRACT**

This research aims at finding empirical evidences whether academic achievement in Statistics is correlated with help-seeking behavior and academic attitude. The subjects of the research consist of 57 students of Psychology Department, Surakarta Muhammadiyah University. The data-collecting method is questionnaire and the sampling technique is population study. The data-analyzing technique includes Regression Analysis and Product Moment Correlation. The findings of this research are as follows: (1) both help-seeking behavior and academic attitude play a role in the achievement ( $R^2 = 0,111$   $p = 0,041$ ); (2) academic attitude has a positive correlation with the achievement ( $r = 0,299$   $p = 0,012$ ); (3) adaptive help-seeking behavior has a positive correlation with the achievement ( $r = 0,378$   $p = 0,002$ ); (4) there is no correlation between avoidance of covert help-seeking behavior and the achievement ( $r = -0,159$   $p = 0,119$ ); (5) academic attitude and adaptive help-seeking behavior have positive correlation ( $r = 0,586$   $p = 0,000$ ); (6) there is negative significance between academic attitude and avoidance of covert help-seeking behavior ( $r = -0,489$   $p = 0,000$ ).
